

Björn Blomberg

Java Developer

Software developer with a broad technical profile

Cover Letter

I am looking for Java roles where I can contribute to backend development, integrations, and long-term system quality. My background in full-stack and integration-heavy projects means I am used to understanding both the business need and the technical trade-offs required to deliver stable systems.

I have worked with Java in both academic and project settings, including a drawing management solution built with Spring Boot, unit testing, and integration tests. I have also contributed to larger integration flows where Java worked alongside technologies such as Node.js, TypeScript, and AWS.

What attracts me to Java roles is the opportunity to build clear, maintainable systems together with other engineers. I do my best work in environments where structure, code quality, and collaboration are treated as part of the product, not as afterthoughts.

Björn Blomberg

Java Developer

Software developer with a broad technical profile

Profile

Björn has built his profile around full-stack development, but with a clear and practical focus on Java-based system development. He has worked on end-to-end solutions, API integrations, and cloud-connected systems in both team-based and independent deliveries.

In the student project carried out with BTH and CGI, he helped develop a drawing management solution for the navy using Java, Spring Boot, unit testing, and integration tests. At Nortic, he also worked close to Java-based ticketing and integration flows while combining Java with Node.js, TypeScript, and AWS services in production-oriented systems.

For Java roles, Björn contributes backend focus, familiarity with agile workflows, and a broad system perspective shaped by Linux, CI/CD, and integration-heavy projects. He is comfortable moving between implementation detail and the larger architectural context.

Work History

Nortic, Fortnox importers 2023/09 to 2024/04

Björn worked on integrating Nortic's internal systems to export transactions to the Fortnox platform.

The solution used AWS services, including Lambda functions and MQTT-based queue flows, to optimize and parallelize the workflow.

He also contributed to Google Wallet and Apple Wallet ticket exports so users could present tickets directly on their devices.

Tekniker: Java, Node.js, TypeScript, JavaScript, Python, HTML, CSS, Git, Bash, Linux, and serverless AWS

CGI, Server Manager Client 2023/08 to 2023/09

Björn was the sole developer for a project that handled server functionality ranging from service monitoring to file retrieval interfaces.

The user interface relied on scalable vector graphics for usability and visual clarity.

Development followed the full CI/CD process from implementation through delivery.

Tekniker: Node.js, TypeScript, JavaScript, Vue 3, HTML, CSS, Git, Bash, Linux, and SVG

CGI, Blekingetrafiken Bus App 2023/08 to 2023/08

Björn handled the entire process from CI/CD and implementation to testing and release.

The application used Blekingetrafiken's API to improve commute planning to and from the CGI office.

Tekniker: Python 3, Git, Bash, Linux, Docker, and Jenkins

Qualifications

- Networking
- Problem-solving
- Software design
- Agile workflows
- Server maintenance
- Linux / Bash
- Assembler AT&T / GNU
- C / C++ / C# / Objective-C
- Java / JavaScript / .NET
- Python / Go
- HTML / CSS / PHP / SQL
- Spring Boot / Gradle
- Unit testing
- Integration testing
- Windows Subsystem for Linux

Tools and Software

- Jira
- Git
- Visual Studio
- Android Studio
- IntelliJ
- Eclipse

Languages

- Swedish
- English

Technical Specializations

- Frontend development
- Backend development
- Linux and DevOps
- CI/CD

CGI, Flexmeister 2023/06 to 2023/08

Björn contributed to a web client and REST API for more efficient flex-time logging and management.

The server side was designed to support future client types without redesigning the core architecture.

The project followed a complete CI/CD workflow.

Tekniker: Python 3, Git, Bash, Linux, Docker, and Jenkins

CGI, Student Project with BTH, Software Developer 2020/02 to 2020/06

Together with his team, Björn built a drawing management system for the navy.

The project used agile workflows and Jira, with implementation in Java, Spring Boot, unit testing, and integration tests.

Tekniker: Java, JavaScript, Spring Boot, Visual Studio Code, Gradle, Git, Jira, unit testing, and integration tests

SIGMA, Web and Software Development 2019/02 to 2019/07

Björn worked with his team on a transportation system for Karlskrona municipality that is used for transport booking.

He contributed as a full-stack developer with an emphasis on testing and front-end development.

Tekniker: JavaScript, Dart, Node.js, Gradle, MariaDB, Azure, Google Cloud, Git, React.js, Maven, and Docker

Sjoberg Prime, Server Manager and Software Developer 2014/01 to 2014/08

Björn set up Linux-based development servers and created iPhone prototypes.

He was also responsible for internal servers and services.

Tekniker: Java, Bash, Objective-C, MySQL, XCode, Linux, Git, and Jira

Simrishamn Municipality, IT Department 2011/03 to 2011/09

Björn developed the municipality's reporting system for home care, primarily in .NET.

Tekniker: MySQL, .NET, JavaScript, Visual Studio, and Git

Crunch Fish, APU and Android App Development 2009/01 to 2010/01

Björn worked on a music-focused Android application and contributed to prototypes for future projects.

Tekniker: Java, XML, HTML, and Android Studio

Education History

Software Engineering Bachelor's degree, Blekinge Institute of Technology 2017 - ongoing

Technical Preparatory Year Bachelor's degree, Blekinge Institute of Technology 2015 - 2016

Java Development Vocational training, 1 year, Malmö 2014 - 2015

Linux System Specialist Vocational training, 2 years, Helsingborg 2012 - 2014

Linux system structure, virtualization and clustering of services, user management in Linux environments, and web server management and maintenance.
